This is Project Report on YourHR.

Description

Job Seekers can login into YourHR and can upload their details along with resume file.

Technologies used

1. Flask : Flask is a Python backend-framework, the functionalities of the web app are implemented using Flask.
2. flask_sqlalchemy- Flask_sqlalchemy is to interact with SQLite database.
3. SQLite : SQLite is the database engine, SQLAlchemy is used as ORM with this relational database.
4. HTML : The frontend of the app is created using HTML.
5. CSS : CSS is for used for providing styling and asthetics to the HTML pages
6. bootstrap v5.2 : Bootstrap is a free, open sourcefront-end CSS framework, Bootstrap templates for buttons, navbars etc are used.

DB Schema Design

1. login : "id", "username", "password", "email"
2. applicant: "id", "first_name", "last_name", "phone", "job", "city", "filename", "file

Steps

1. Download the code file from github / drive / zip and unzip it.
2. Open the code in any IDE (like VS Code).
3. Run the following command in terminal: "python main.py"
4. Go to local host at port 5000
5. Create your account and submit application.
